Copy of Thuong Nguyen Nhu

🙋🏻 Brief introduction

An engineer who is young, talented, creative, passionate in working, and always puts effort into self-improving knowledge and skills in the IT field. Be able to self-study new technologies fast and eager for new challenges at work.

👔 Work experience

DevOps Engineer

***Viettel Cyber Security**, Hanoi - Vietnam, Mar 2020 - Present*

I joined Viettel Cyber Security Company as an R&D Engineer after graduating from university. I am proud to have helped over 03 project teams successfully migrate the deployment model with the orchestration tool, thereby reducing the time and cost of deployment for the company.

- Developed and directly contributed more features needed to the Harbor project (an open-source trusted cloud native registry).
  - Researched on The Update Framework (TUF) with Notary.
  - Designed, documented and delivered the update/upgrade process for the company's software products.
  - Adding the file repository feature (support upload trusted files), license authentication (authenticating users through a centralized license system of the company), etc… Build tools used internally by the company such as license scanner tool, upload trusted files (jetty), repository backup tool for Harbor.
- Designed, documented and delivered the CI/CD workflows with Git, Github, Git Release branching models; Packer automatically builds machine images with

Jenkins.

- Designed and delivered the SSH access management system with Hashicorp Vault (using Signed SSH Certificate feature) for all customer servers.
- Research on Hashicorp Nomad (a container orchestration solution similar to Kubernetes); Analyzing, designing, consulting the solutions architecture with Nomad for SIEM, SOAR, Threat Intelligence systems.
- Research on Service Discovery and Configuration Management with Hashicorp Consul; LB with Traefik & Envoy Proxy; GitOps workflows with Nomad; DevSecOps CI/CD pipeline.
- Joined, designed, and migrated a SIEM (Security Information and Event Management system) running in Docker Compose to Hashicorp Nomad with over 80 services.
- Deployed and delivered the internal systems (Harbor, Vault Server, Tableau Server, SeaTable)
- Excellent employee achievement October 2020, January 2021.

DevOps Trainer

***TechMaster**, Hanoi - Vietnam, Mar 2021 - Present*

I participated in the DevOps training course at TechMaster as a trainer, joined fresher training for businesses.

- Basic of Git, Docker, Docker Compose, Docker Swarm.
- Basic of Jenkins, build CI/CD workflows with Jenkins.
- Basic of Linux, configuration management and application deployment with Ansible.

Technical Leader

HomoHouse (FPT University), *Hanoi - Vietnam, Aug 2019 – Dec 2019*

The leader of the capstone project has 5 members (1 BA, 4 Developer) with Iterative Incremental model. Receive requests from BA, research and analyze requests with team members. Write detailed design documents and implement 4 projects.

- Building workflow for team members, solutions for architecture, and infrastructure of projects.
- Train team members to use some technology for the project such as NodeJs, ReactJs, Docker, Docker Compose.
- Design and build systems using microservices architecture with GKE (Google Kubernetes Engine).
- Integrated testing and automated deployment using container docker with GKE, Gitlab CI for all 4 projects.
- Design and implement data analysis tools and room search tools using Elasticsearch.
- Directly implement the project's main functions such as search engine, upload a room, real-time messaging, data analysis (admin side), notification system, etc...

Frontend Developer (Interns)

Fingroup, *Hanoi - Vietnam, Jul 2018 – Jan 2019*

Receive requests from PO, research, and analyze requests with team members. Write detailed design documents and analyze scenarios with testers then implement two company's projects.

- Design and implement 2 projects using ReactJS with Atomic Design architecture.
- Real-time synchronization of ports with a number of over 10,000 records.
- Build real-time chat using Firebase Services.

👨‍💻 Side projects

Blog About Software Engineering

Share my technology experience about software engineering. The purpose is to reinforce my knowledge and help other engineers.

🔗 Link: https://thuongnn.medium.com.

Algorithm Simulation

An application that simulates sort and floating-point number algorithms. Allows users to adjust input data and adjust the speed of the algorithm.

🔗 Link: Video, Source.

🛠️ Skills

🔤 Programming Languages

Golang (Preferred), JavaScript, TypeScript, Python, Java, C#, Bash/Shell-script.

I'm quite confident that I can catch up with other languages when needed very fast.

🖥️ Web Front-end Technologies

React (Preferred), Angular.js, Ant Design, Webpack, HTML5, CSS3.

⛓️ Back-end Technologies

Frameworks/Libraries: Beego, Django, Node.js, Express.js, TUF with Notary.

Databases: MySQL, PostgreSQL, Redis, MongoDB, MSSQL.

Software architecture: monolithic, microservices, and serverless.

🔨 DevOps

Linux, Networking, Operating System, Docker, Docker Compose, Nomad, Kubernetes, CI/CD (Jenkins & Gitlab CI), Infrastructure as Code with Terraform, Ansible.

Reverse Proxy, HA-LB (layer 4 & 7) with Consul, Envoy Proxy, NGINX, HAProxy, Traefik, Keepalived.

Cloud Services: GCP (GKE, GCE, GCR, Cloud Storage, Firebase), AWS (IAM, EC2, AWS Lambda, Cognito, API Gateway)

💁🏻‍♂️ Other

Solving problem, Team working, Mentoring, and Presentation.

📚 Education

B.Eng. in Software Engineering

FPT University, Oct 2015 – Dec 2019

- Achieved the student activities excellent movement (for 4 years at FPT University)
- Achieved a high score with (9.0/10) in the Information System major at the 2019 graduation thesis.
- Achieved excellent students in the spring semester of 2019.
- Achieved the first prize in the FPT University's MV Contest 2016.

Full Stack Web course

Techkids - Coding School, Feb 2018 – May 2018

- Achieved the first prize in the Hackathon TechKids (Web Full Stack Gen 11)

🗣 Languages

English 🇺🇸

TOEIC 600 (Dec 2020).

Vietnamese 🇻🇳

Native speaker.
